

1. Find sum of first 10 natural numbers.

Source code:

```
# Find sum of first 10 natural numbers.
```

```
sum = 0
```

```
for i in range(1, 11):
```

```
    sum = sum + i
```

```
print("Sum of first 10 natural numbers is:", sum)
```

Output:

A screenshot of a code editor with a dark background. The code is written in Python and calculates the sum of the first 10 natural numbers. The code is as follows:

```
# Find sum of first 10 natural numbers.  
sum = 0  
  
for i in range(1, 11):  
    sum = sum + i  
  
print("Sum of first 10 natural numbers is:", sum)
```

The output of the code is displayed at the bottom of the editor:

```
... Sum of first 10 natural numbers is: 55
```

2. Find factorial of a number.

Source code:

```
#Find factorial of a number.
```

```
num = int(input("Enter a number: "))
```

```
factorial = 1
```

```
for i in range(1, num + 1):
```

```
    factorial = factorial * i
```

```
print("Factorial is:", factorial)
```

Output:

```
#Find factorial of a number.
num = int(input("Enter a number: "))

factorial = 1

for i in range(1, num + 1):
    factorial = factorial * i

print("Factorial is:", factorial)

... Enter a number: 4
Factorial is: 24
```

3. Print Fibonacci Series.

Source code:

```
#Print Fibonacci Series.
```

```
n = int(input("Enter number of terms: "))
```

```
a = 0
```

```
b = 1
```

```
print("Fibonacci Series:")
```

```
for i in range(n):
    print(a, end=" ")
```

```
c = a + b
```

```
a = b
```

```
b = c
```

Output:

```
#Print Fibonacci Series.
n = int(input("Enter number of terms: "))

a = 0
b = 1

print("Fibonacci Series:")

for i in range(n):
    print(a, end=" ")

    c = a + b
    a = b
    b = c

... Enter number of terms: 5
Fibonacci Series:
0 1 1 2 3
```

4. Find largest among 3 numbers.

Source code:

```
#Find largest among 3 numbers.  
a = int(input("Enter first number: "))  
b = int(input("Enter second number: "))  
c = int(input("Enter third number: "))  
  
if a > b and a > c:  
    print("Largest number is:", a)  
  
elif b > a and b > c:  
    print("Largest number is:", b)  
  
else:  
    print("Largest number is:", c)
```

Output:

```
#Find largest among 3 numbers.  
a = int(input("Enter first number: "))  
b = int(input("Enter second number: "))  
c = int(input("Enter third number: "))  
  
if a > b and a > c:  
    print("Largest number is:", a)  
  
elif b > a and b > c:  
    print("Largest number is:", b)  
  
else:  
    print("Largest number is:", c)  
... Enter first number: 3  
Enter second number: 2  
Enter third number: 4  
Largest number is: 4
```

5. Create Student Result System

- Input student details
- Input marks
- Calculate percentage
- Display grade

- Use:

- if-elif-else
- loops
- user input

Source code:

```
# Create Student Result System
# Input student details
name = input("Enter student name: ")
roll = input("Enter roll number: ")

# Input marks
m1 = float(input("Enter marks of Subject 1: "))
m2 = float(input("Enter marks of Subject 2: "))
m3 = float(input("Enter marks of Subject 3: "))

# Calculate total and percentage
total = m1 + m2 + m3
percentage = total / 3

# Display grade
if percentage >= 90:
    grade = "A+"

elif percentage >= 75:
    grade = "A"

elif percentage >= 60:
    grade = "B"

elif percentage >= 40:
    grade = "C"

else:
    grade = "Fail"

# Display result
```

```
print("\n----- STUDENT RESULT -----")
print("Name:", name)
print("Roll Number:", roll)
print("Total Marks:", total)
print("Percentage:", percentage)
print("Grade:", grade)
```

Output:

```
# Display result
print("\n----- STUDENT RESULT -----")
print("Name:", name)
print("Roll Number:", roll)
print("Total Marks:", total)
print("Percentage:", percentage)
print("Grade:", grade)]

... Enter student name: Anshika
Enter roll number: 1
Enter marks of Subject 1: 90
Enter marks of Subject 2: 92
Enter marks of Subject 3: 95

----- STUDENT RESULT -----
Name: Anshika
Roll Number: 1
Total Marks: 277.0
Percentage: 92.33333333333333
Grade: A+
```
